

Smart POS

We help merchants to capture more business through a faster, more convenient way for making payment by customers anytime and anywhere.

Perfect Combination of POS & Smart Terminal

A unique platform that combines POS and Smart Terminal (on which 3rd party value-added business applications can be developed). Our Smart POS enables retailers to process payment (including credit card/WeChat/Alipay/loyalty point/coupon/local SVFs), support O2O business and manage supply chain, customer relationship, logistics functions all on a single device.

Why Smart POS?

Supports multiple payment options: accepts magnetic stripe, EMV (also known as chip cards), NFC, Bluetooth and QR code payment technologies

Face/ voice authentication technology: supports customer identity validation with face/ voice recognition for high value or high risky mobile transactions

Ultimate flexibility: gives merchants the flexibility to use 3rd party applications and provide better integration into their backend systems

All-in-one design: built-in payment terminal, register, camera, scanner, printer, and more

What Smart POS can do?

Payment	Bankcard Wechat, Alipay, Baifubao Pre-paid, loyalty point, coupon verification
O2O	Takeout service Group purchase Travel Micro-merchant
Management	Membership, CRM Queue Supply chain
Others	Large supermarket P2P

■ This new technology can help banks, payment processors, merchants and customers to mitigate risk of payment fraud.

- Applications include:
- Mobile payment at POS, online or mobile devices
 - Login and transaction verification for online and mobile banking
 - Cardless ATM transactions
 - Secure in-store pickup of online purchases
